

how to show all bariol icons

adobe illustrator and indesign

it makes it very easy to see all the characters and symbols in a font.
to get to it you just: choose type > glyphs. this opens the glyphs palette.

other software

other softwares have similar glyphs palettes like illustrator (“symbols” in word, for example) and there are softwares that do not have this option (photoshop).
a way to access the alternate glyphs can be:

mac os

open a document, and place the insertion point where you want the special character or symbol to appear. choose edit > special characters to open the character viewer, or choose show character viewer from the input menu in the menu bar (looks like a flag or character).

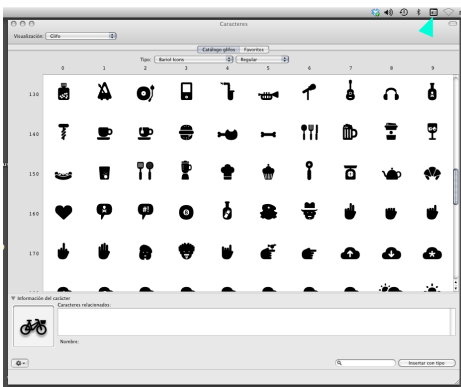

if you don't see show character viewer in the input menu, follow the steps in this topic to show the character viewer in the menu bar.

show the character viewer in the menu bar

_choose apple menu > system preferences, click language & text, and then click input sources.

_select the keyboard & character viewer checkbox.

you can now open the character viewer from the input menu in the menu bar (looks like a flag or character).

windows

open character map by clicking the start button picture of the start button. in the search box, type character map, and then, in the list of results, click character map.

_click the font list, and then click the font you want to use.

_click the special character you want to insert into the document.

_click select, and then click copy.

_open your document and click the location in the document where you want the special character to appear.

_click the edit menu, and then click paste.
